PERFECT PRO<sup>®</sup>

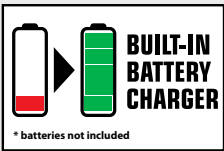

**"THE MUSIC IS NUMBER 1"**

# FATBOX<sup>®</sup>

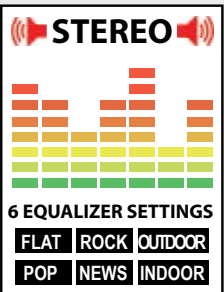

PERFECTPRO<sup>®</sup>

Like all Perfectpro worksite radios, the Fatbox is JIS4 certified. This means that the radio is rain-resistant on all sides. We consider this essential for a worksite radio.

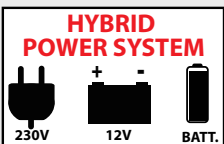

The Fatbox is equipped with a built-in battery charger for charging universal size D Ni-MH batteries. This offers you the freedom to listen to your music any time and anywhere. You are able to charge the batteries from either mains 230Volt or even in your car or van from the 12Volt cigarette lighter. (12Volt cable included, batteries not included).

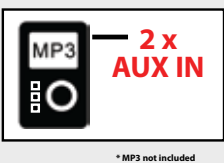

The Fatbox is one of the most powerful worksite radios but the big difference is in the music. The Fatbox offers the highest sound quality and you can hear it; a clear and open sound with minimum distortion. To adjust the sound to your taste you can choose from 6 equalizer settings:  
 FLAT: the standard spatial Fatbox sound setting  
 ROCK: additional sound support for rock music  
 OUTDOOR: extra powerful sound for use outdoors or in large rooms  
 POP: for easy and continuous listening to pop music  
 NEWS: for easy and continuous listening to speech and news programs  
 INDOOR: the warm sound adjustment for use indoors and in smaller rooms.  
 The choice is yours: "The music is number 1".

A good, clear FM-reception is guaranteed by the digital PLL-tuner. The large LCD display shows you all the information clearly. There are 6 presets for your favourite stations (6 for AM and 6 for FM).

The power supply of the Fatbox is very versatile; 230Volt mains, 12Volt from your car battery or playing on universal batteries. Furthermore you are able to charge the batteries from either mains 230Volt or even in your car or van from the 12Volt cigarette lighter. (12Volt cable included, batteries not included)

The Fatbox is equipped with 2 aux-in ports for playback from your MP3 player or iPod. The first aux-in port is placed on the front panel for easy access. The second port can be found in the rain- and dust resistant Media Storage Compartment located on the side of the radio. You can use it for safe storage of your vulnerable MP3 player or other stuff. The Audio-Aux cable for connecting your MP3/iPod is included.

The Fatbox has a 3 metres long rubber cable that can be rolled up quickly and easily on the back of the radio.

# "THE M

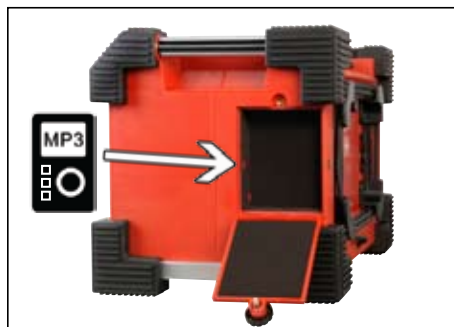

The Fatbox is built for music. The you work with everyday. That is the music-tool for you as tradesman.

# MUSIC IS NUMBER 1"
